

PROJECT 3 - MSR

NINJA-BUILD

Natalie Simtion, Dustin Nguyen, Sawyer
Jones & Youa Yang

AGENDA

Stage 1 – Issues

Stage 2 – Commits

Stage 3 – Code-size

Stage 4 – Issue Density

Introduction

- Our repository for this project is Ninja-Build
 - <https://github.com/ninja-build/ninja>
- Ninja is a small build system with focus on speed
- 10+ years on GitHub

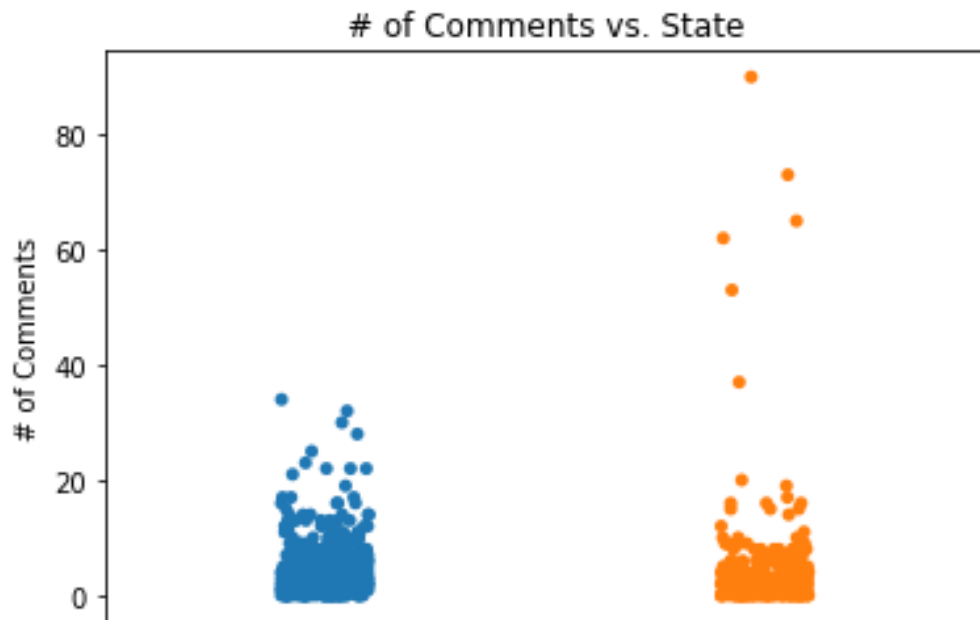

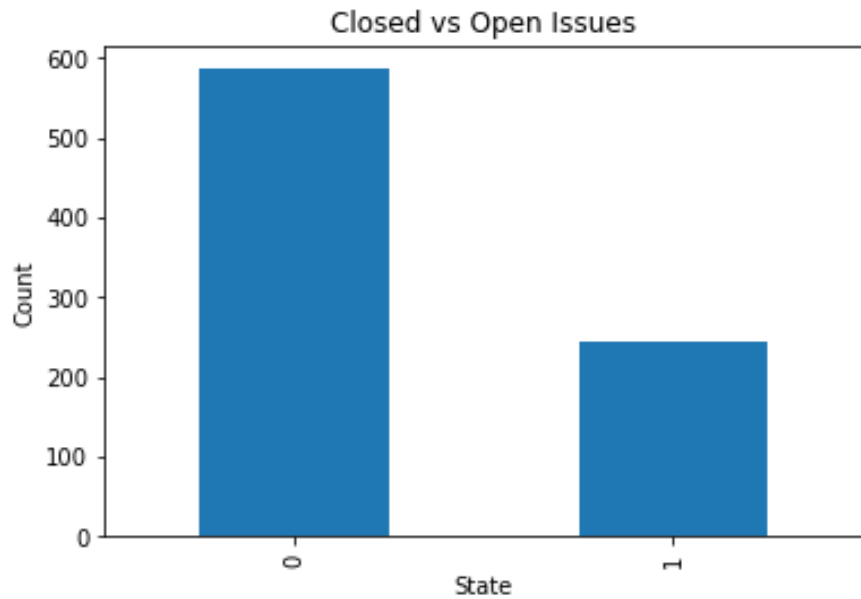

ISSUES

Table – slice of issues data

- State (0= Closed, 1= Open)
- There are more closed issues (>2X) than open issues
- Aside for those “few” outliers the # of comments doesn't seem significant whether an issue is closed or open
- Our repo did not have data for assignees or # of assignees for issues

CORRELATION HEATMAPS

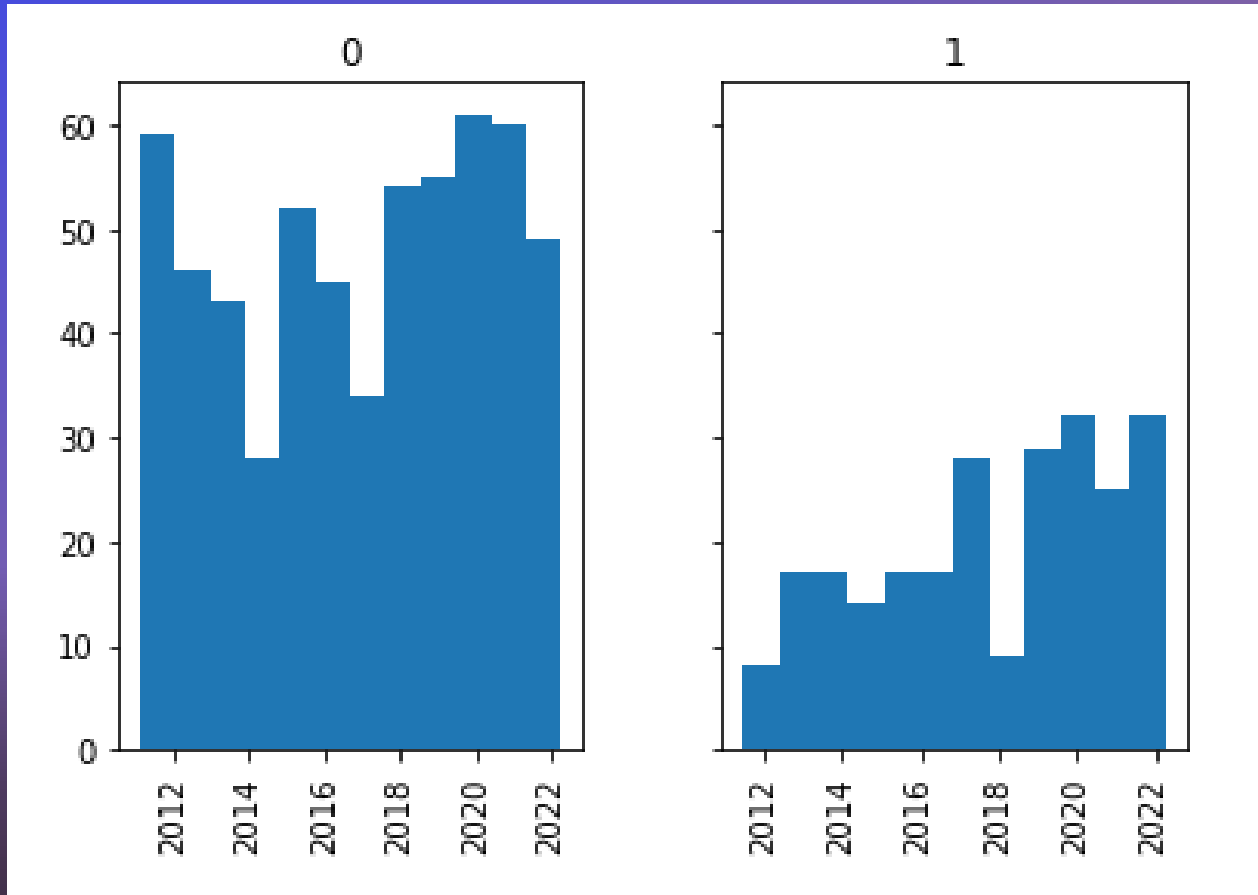

- Correlation heatmap for all numeric attributes
- Heatmaps could indicate relationships of attributes to each other
- Heatmap for our data indicates a positive relationship between State (Open/Closed) and # of Labels
- Note: not all correlation may be meaningful

STATE VS # OF LABELS

- State (0= Closed, 1= Open)
- Overall are a lot of Closed and Open issues without labels
- More Open issues have more labelling

ISSUES STATE OVER PROJECT LIFETIME

- Overall, there doesn't appear to be a trend for closed issues over the lifetime of the project
- There is a positive trend in number of open issues over the lifetime of the project

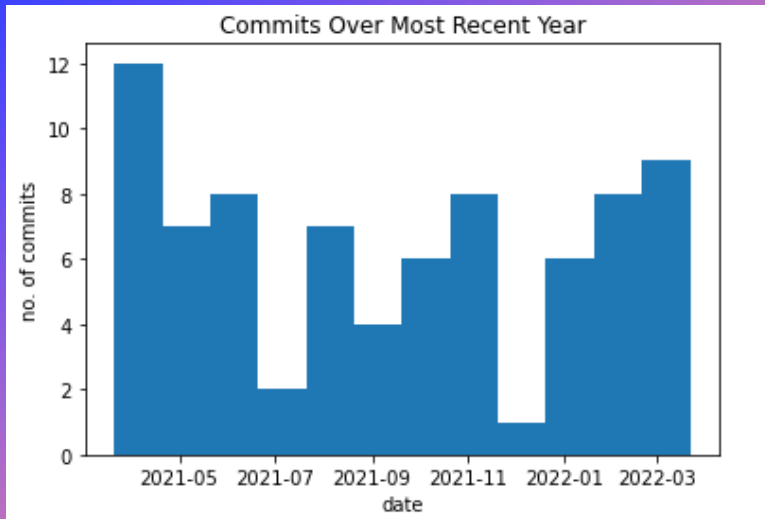

COMMITTS

Table – slice of commits data

	Date	URL
0	2022-03-22 10:39:03	https://api.github.com/repos/ninja-build/ninja...
1	2022-03-21 13:44:26	https://api.github.com/repos/ninja-build/ninja...
2	2022-03-20 10:22:00	https://api.github.com/repos/ninja-build/ninja...
3	2022-03-11 15:22:13	https://api.github.com/repos/ninja-build/ninja...
4	2022-03-11 15:22:13	https://api.github.com/repos/ninja-build/ninja...

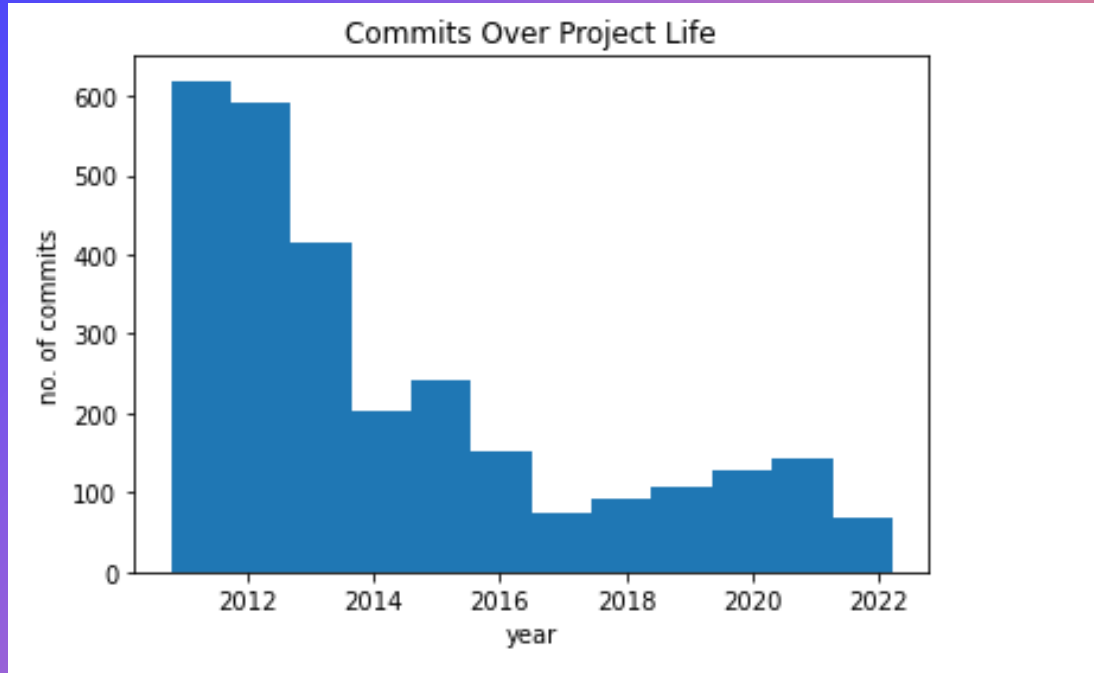

COMMITTS

- YTD – No obvious pattern
- FIRST YEAR – Repeated downward trend with spikes

COMMITTS

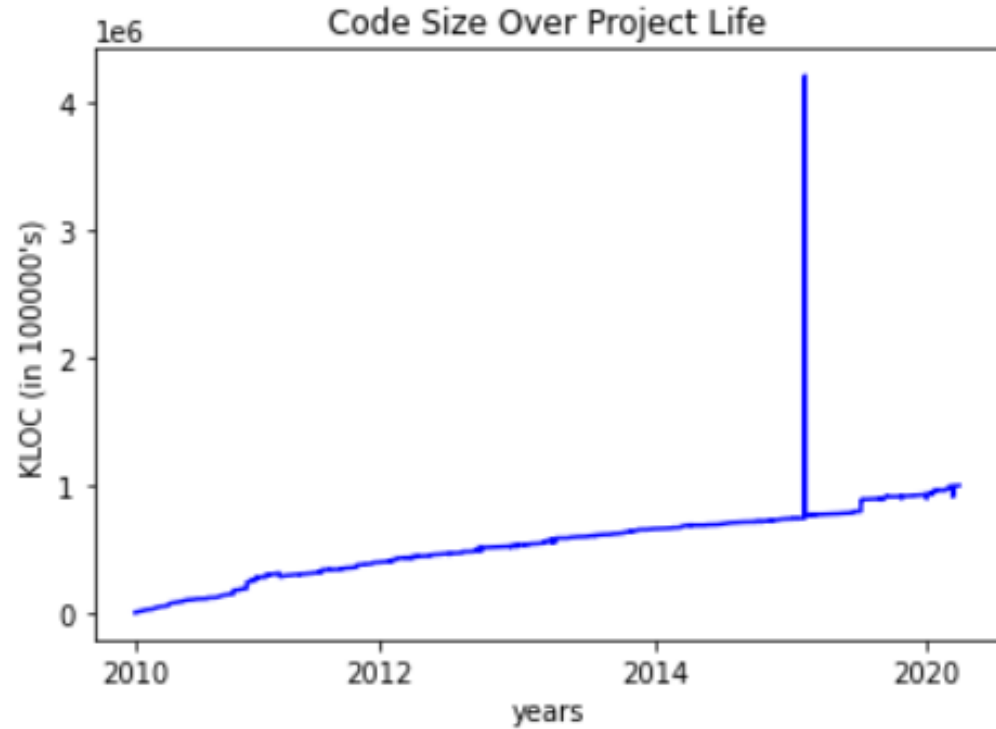

- DOWNWARD TREND OF NUMBER OF COMMITTS AS THE PROJECT AGED

CODE SIZE

CODE SIZE

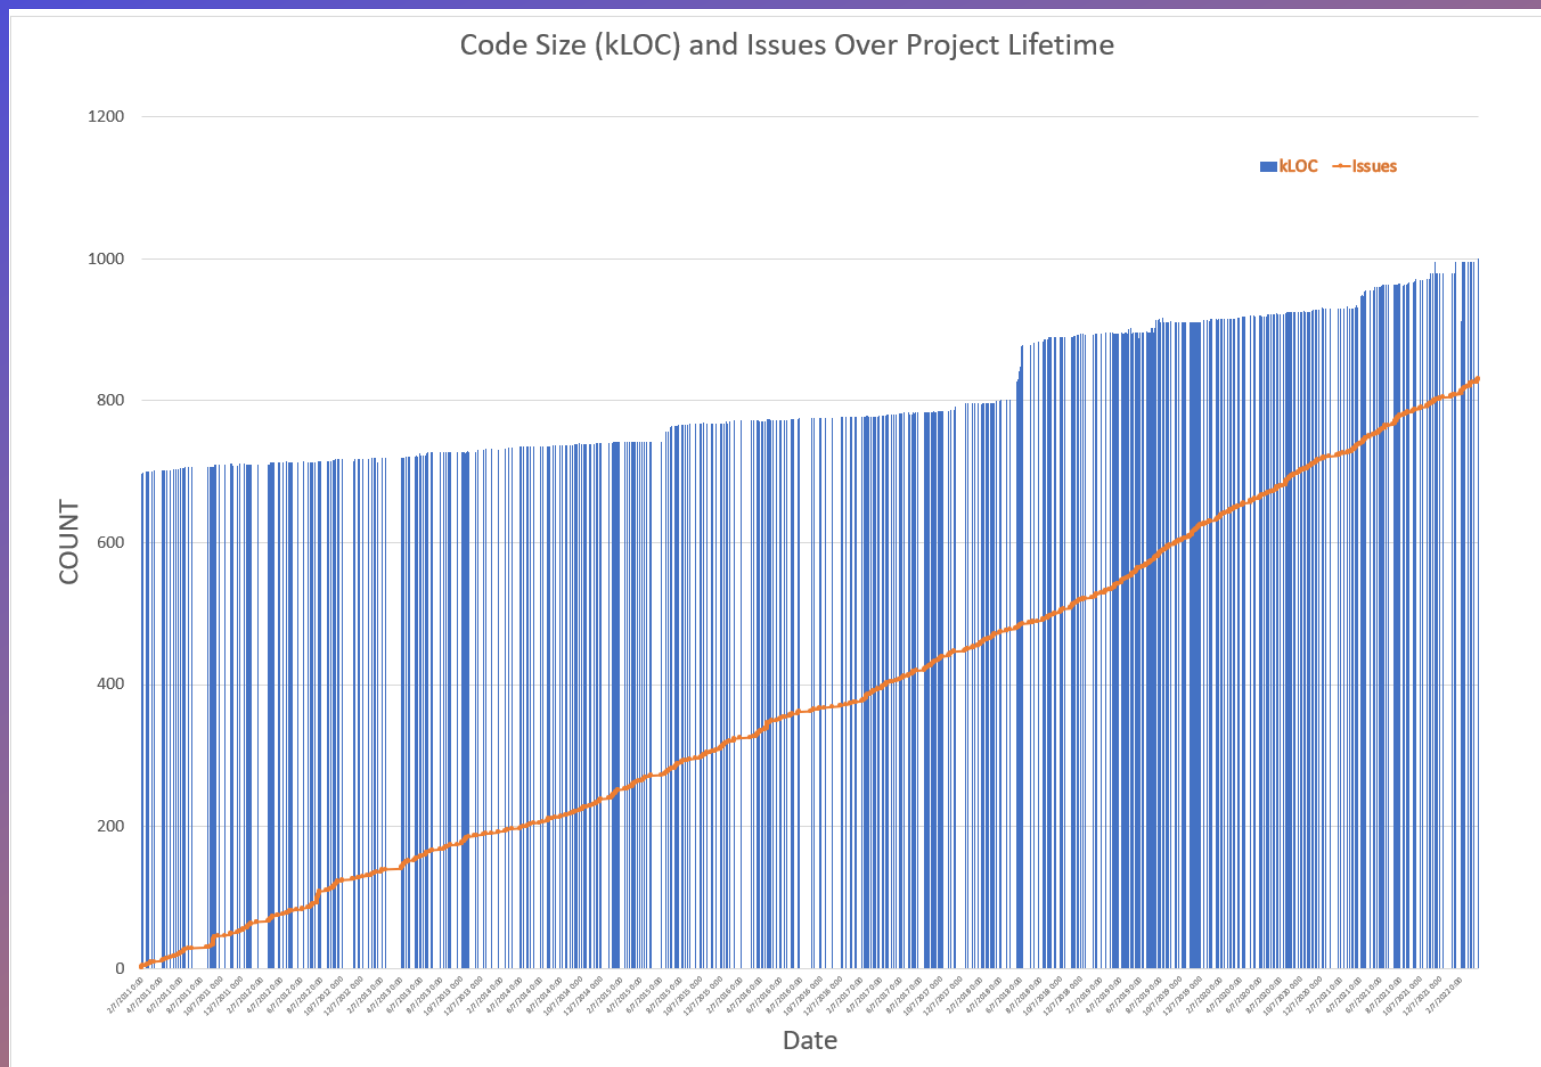

- Upward trend in code size as commits are published
- Code Size anomalies:
 - 2017-04-12 4215484 lines
 - 2017-04-12 4215477 lines
- Fairly monotonic
- Domain of date/time
- Codomain of KLOC

ISSUE DENSITY

Issue Density

Issue Density

- Upward trend in issue density over time
- Issue density seems to be monotonic
- Code size does have a steady increase with step-ups, likely due to bigger changes
- As the project aged issue density should increase, which seems counter to what we learn
- There should be a peak of issue density somewhere in the middle with a downward trend as the project age
